

Copperer Edition

Küppersbusch
FÜR KÜCHEN MIT STIL

Luxurious elegance

Stylish design:
Copper is the material
of the hour!

Trend researchers are referring to a new colour trend that is featured in all design and everyday sectors and that is becoming increasingly popular. The highlights of copper are its expression of a cultured lifestyle and an enjoyment of luxury. In colour symbolism, the material copper is associated with the Goddess Venus and thus represents a sense of beauty, creativity, sensitivity and joie de vivre.

With its new Copper Edition, Küppersbusch is presenting a selection of premium kitchen appliances for kitchens with style.

The image shows two black Küppersbusch ovens side-by-side. Each oven has a copper-colored horizontal accent bar above the door and another below. The control panels are located above the doors and feature various icons and a small red digital display. The left oven's panel includes a power button, a 'P' button, and several function icons, with the text 'microspeed plus' below the display. The right oven's panel includes a power button, a 'M' button, and several function icons, with the text 'compact oven prof' below the display. The brand name 'Küppersbusch' is printed on the copper bars. The ovens are set against a dark background.

Elegant accents

for purists and romantics

Copper is the multitalent among metals: warm red shades and a golden shimmer – an enrichment for every interior design style.

This makes the material the perfect embellishment for every kitchen. Küppersbusch is featuring this mega trend in its Copper Edition and giving it a new interpretation: The straightforward design of the multiple award-winning premium kitchen appliances with the softly shimmering copper accents will convince both purists and romantics.

Copper cult for every kitchen

High-gloss black or white glass fronts – copper makes built-in appliances an eyecatcher in every kitchen – in straightforward high-gloss fronts as well as in country house-style kitchens.

The Copper Edition is not only visually convincing. With the 45 cm high compact appliances range, Küppersbusch consistently showcases the possibilities of different appliance technologies. Kitchen planning is provided with new appliance combination possibilities for open-plan living.

Compact oven, steamer, oven with integrated microwave, coffee machine and LCD TV can be installed in a row (see previous page) or combined – as shown here – as a compact block of four. The Copper Edition is completed by the 60 cm high oven, island and chimney cooker hoods, a free-standing fridge and warming drawers.

Excellent design

Nowadays, cooking involves a lot more than merely preparing meals. It is an expression of a modern, individual lifestyle. A lifestyle, in which good designs are just as important as a contemporary, healthy diet. In which high-tech counts just as much as quality and durability. With Küppersbusch you are choosing innovative technical solutions and award-winning product designs.

The jurors of the Red Dot Design Award were impressed by the new Copper Edition and awarded the built-in oven EEB 6550.8 JX incl. design kit acc. no. C6000 a prize in the category of “product design”.

reddot award 2014
winner

Premium+
